

2 Cubes in One!

Prime Line[®]
79530

**It may look like one cube
but there's another one
nesting inside!**

That's right, separate them and you'll have two identically sized cubes.

To do so, open (unfold) the outer cube, find a seam at the end and gently pull apart. Then fold them both into individual cubes.

Reverse the process to put them back together.
